

Accu-Drawer SD

Sensor Driven Point-of-Use

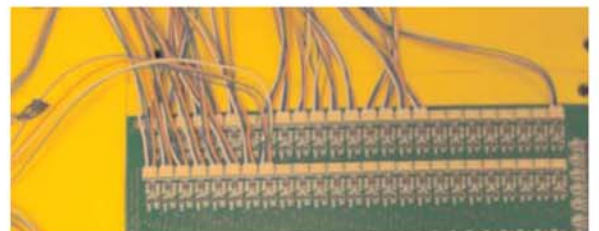

CribMaster Accu-Drawer SD

Imagine your employees walk up to a cabinet that stores tooling, maintenance parts, kits or even haz-mat materials. Like all of our CribMaster point-of-use devices, the employee is required to identify himself or herself. The drawer unlocks using an electro magnetic lock and inside are the items they need to complete their task. Each bin location is identified with an optical sensor. When the item is removed, inventory is automatically adjusted and monitored through CribMaster.

The Accu-Drawer SD is a great solution for managing kits at point-of-use, tracking the usage of durable items, or tracking maintenance items to work orders and tasks and monitoring of inventory in FOD critical areas. There is no inventory to scan or transactions to log. Transactions are automatically recorded when inventory is removed from the cabinet and when items are missing from the cabinet the touch screen displays "items out" on the ATR screen, making FOD checks easy, fast and accurate.

The CribMaster Accu-Drawer SD brings many functions, features and benefits to your operation:

- Simple "plug and play" self contained sensor driven device
- Touch screen control allows for User ID log in
- Total kit tracking and replenishment process tracking
- Lot number and expiration date tracking and notification
- Durable 100% made in the USA 16 gauge steel construction
- Direct e-mail or EDI communication with suppliers
- 170+ standard CribMaster reports with automated scheduling
- Custom report configurable with Crystal Reports
- Complete work order system and ability to track inventory to work orders
- Item reservation and predictive ordering
- Reduced mis-use of inventory
- Improved inventory accuracy and FOD processes
