

General Data

Operating Data	Model: SPINJET-GREEN LINE
Operating range of coolant pressure [PSI]	290-580 [20-40 bar]
Operating range of coolant flow rate [gal/min]	2.64-5.28 [10-20 l/min]
Rotational spindle speed [rpm]*	35000- 55000
Optimum cutting tool diameter [inch]	Drilling: .0196"-.0787" [0.5-2 mm]
	Milling : .0196"-.157" [0.5-4 mm]
Maximum tool shank diameter [inch]	.275" [7 mm]

- Notes
- Rotational spindle speed is based on coolant pressure and flow rate
 - Coolant pressure is measured from the spindle inlet

New Shaft Lock Mechanism

Shaft lock flag key has been replaced by a “GJET” shaft lock key

Machine tool requirements for using SPINJET-GREEN LINE spindles

1. Coolant flow through the machine spindle
2. Min. coolant pressure at the spindle outlet: 20 bar (290 psi).
3. Max. coolant pressure at the spindle outlet: 40 bar (580 psi).
4. Min. flow rate: 12 l/min (3.17 gal/min.).
5. Coolant filtration level: max. 100 µm.

Using Precision ER11 Collets

When using ER11 spring collets, it is recommended to use only high quality precise collets that are engineered for maximum accuracy and tool life.

Max. collet runout (TIR) - 5 µm

Follow the 10% Rule:
As the cutting tool enters the workpiece, RPMs will be reduced due to load.
The GREEN LINE Jet Spindle RPM value when working should not drop more than 10% of the RPM value registered at ‘idle speed’.

Cutting Conditions

1. Monitoring RPMs during GREEN LINE Jet Spindle operation is critical, to ensure optimum machining conditions and to avoid damage.
2. Cutting speed may be influenced by material hardness,workpiece topography and/or cutting tool geometry. Refer to cutting tool manufacturer's documentation.
3. Dramatic RPM fluctuations during GREEN LINE Jet Spindle operation can indicate problems such as inadequate coolant pressure or a broken cutting tool.

Jet Spindle Operating Guidelines

Application	Material	Cutting Tool Dia.		Z (Teeth)	Ap - Depth of Cut		Ae - Width of Cut		Coolant Pressure (bar)	RPM	Fz per tooth

General instructions for storage:

The **SPINJET-GREEN LINE** spindles do not require specific periodic maintenance; however the following instructions should be followed before storing a spindle:

1. Clean the spindle by air blowing for 10-15 seconds.
2. Max. air pressure for cleaning is 2 bar (30 psi). The rotational speed during cleaning must not exceed 50000 rpm.
3. After cleaning, disconnect the spindle from the display device.
4. Place the spindle in its original packaging box and store it in the appropriate place.

*** New Warranty Policy

Warranty policy for new SPINJET-HPC LINE spindles:
At least 300 hours of use or 12 months from the date of invoice, whichever comes first.

Warranty policy for repaired / refurbished SPINJET-HPC LINE spindles:
At least 200 hours of use or 6 months from the date of invoice, whichever comes first.
